Education

SRM Institute of Science and Technology **May 2026**
Bachelor of Technology, Computer Science w/s AIML *9.25 CGPA*

Experience

MUFG Global Services (Mitsubishi UFJ Financial Group) **November 2025 – Present**
AI Engineer *Bangalore, India*

Joined as AI Engineer Intern (November 2025 – July 2026); converted to full-time in July 2026

- Architected an **AI-driven KYC platform** spanning document ingestion, **OCR/extraction**, evidence processing, **GenAI-powered risk assessments**, workflow orchestration, and automated report generation using **Python, Azure AI services, and REST APIs**.
- Built an **asynchronous, event-driven workflow orchestration** using **LangGraph, Azure Service Bus, and worker-based microservices**, enabling parallel document processing, checkpointing, fault recovery, and resilient state management with **Azure Cosmos DB and Blob Storage**.
- Developed **GenAI-powered KYC assessment and data-processing pipelines for screening-hit analysis, adverse-media assessment, and entity resolution**, incorporating structured LLM outputs, **JSON-schema validation, evidence grounding, versioned prompts, audit trails**, and automated **DOCX/XLSX report generation**.

Australian National University **June 2025 – August 2025**
AI/ML Research Intern *Canberra, Australia*

- Fine-tuned a domain-specific **AstroLLaMA LLM** on scientific literature using **QLoRA**, **TokenizerFast**, and **PEFT**, achieving a **26% perplexity improvement on 385K tokens**.
- Deployed the model via a **Flask-based REST API**, and authored a technical report detailing preprocessing, methodology, and performance benchmarks.

Samsung R&D Institute **March 2024 – July 2024**
ML Research Intern *Chennai, India*

- Fine-tuned **Stable Diffusion** and **DreamBooth-based GANs/cGANs** on a 50-image product dataset using LoRA, improving image resolution and performance under constrained GPU-RAM conditions.
- Integrated **LLaMA-based prompt generation** into a **text-to-image pipeline** and optimized **img-to-img** and **Refiner training**, research resulted in a **publication** earning a **Certificate of Excellence**.

Projects

Formulary Lens | *v0-ai-us-formulary-ey5461.vercel.app*

- Built and deployed an **AI-powered analytics platform** using **Mistral-7B**, few-shot prompting, and Flask APIs to generate real-time Medicare Part D formulary insights from structured data.
- Integrated **GCP MySQL** with an LLM-powered NLP pipeline to automate coverage analysis and generate predictive market-access insights.

FireWatch | *firewatch-hosted.vercel.app*

- Built a distributed wildfire detection system using **NASA satellite imagery** and a fine-tuned **VGG-19 CNN**, achieving **97%+ test accuracy** on a dataset of **42,000 images**.
- Deployed the model with real-time **MLOps workflows**, enabling scalable live monitoring and inference via a production-ready web interface.

Technical Skills

Languages: Python, C/C++, SQL
AI/ML: PyTorch, TensorFlow, Scikit-learn, Hugging Face, LoRA, QLoRA, RAG, LLMs, Prompt Engineering
Agentic AI: LangGraph, LangChain, Multi-Agent Workflows, AI Agents
Backend/Cloud: Flask, REST APIs, Azure, Azure Document Intelligence, GCP, MySQL
Tools: Git, Unix, Pandas, NumPy

Leadership / Extracurricular

- Selected as a top 20 student nationally for the fully funded Future Research Talent (FRT) Program at ANU, Australia.
- Winner, CodeFest 2025 – developed an AI platform for Medicare Part D formulary automation.
- Co-authored "ViDAS: Vision-based Danger Assessment and Scoring" (ICVGIP 2024).
